

PROFESSIONAL TESTIMONIAL

We have appointed him and discussed business performance and decision-making matters with Gitanj Sheth during 2024-25.

He demonstrated a strong quantitative mindset and a willingness to examine the numbers before reaching a conclusion. What I appreciated most was his ability to translate numerical observations into practical business questions. His approach was objective and fact-based, while still considering the realities of running a business.

He was able to look at different variables together and consider their potential commercial implications. His ability to combine quantitative reasoning with practical business understanding was impressive.

What impressed me was his approach to understanding the problem. Instead of immediately proposing a solution, he first tried to understand the business objective, the existing process, the stakeholders involved and the constraints affecting the situation.

I believe this analytical capability can be particularly valuable in strategy and consulting assignments. I had the opportunity to discuss a business challenge with Mr. Sheth relating to our real estate business. I believe this ability to combine numbers with business judgement is a valuable consulting skill.

He was able to break a relatively complex issue into smaller and more manageable components and identify the areas that required further analysis.

His ability to distinguish between the visible problem and the underlying business issue demonstrated strong analytical maturity. I found Mr. Sheth to be logical, structured and objective in his approach. His problem-structuring ability is, in my opinion, one of his strongest professional qualities.
