RECOMMENDATION FOR EXPERT ADVISORY

We have appointed Mr. Gitanj A. Sheth and got the opportunity to interact with Mr. Gitanj A. Sheth on technology and business-related matters.

He has a natural ability to understand the broader business context before analysing an individual problem. His questions are relevant, his thinking is structured and his recommendations are generally focused on practical implementation.

One of his strongest qualities is his ability to look at a business from an objective outside perspective. He asks fundamental questions about the business model, customer, economics, processes and scalability before forming an opinion.

I was particularly impressed by his ability to combine technology, data and business thinking while evaluating a problem.

His analytical approach and understanding of technology allow him to identify opportunities that may not be immediately obvious from a conventional business perspective.

I found his thinking structured, objective and solution-oriented. I would be pleased to recommend him for business strategy, analytics and consulting-oriented assignments.

I believe Mr. Gitanj A. Sheth has the potential to become a strong strategy and management consultant, particularly in situations requiring analytical problem-solving and technology-enabled transformation.
